The Code for Smart Communities: Powering Sustainable Cities and the Planning Imperative

Adam Beck, Founding Director, Smart Cities Council Australia New Zealand

The Code for Smart Communities is set to become a benchmark for accelerating the sustainability outcomes of our communities by embracing technological innovation, applying data-driven decision making, and ensuring intelligent design practices.

The Code will provide public and private sector developers with a framework for planning, designing, and delivering urban development projects that can accelerate liveability, workability, and sustainability outcomes through smart technology deployment, comprehensive urban data analytics and performance reporting.
