

Waste Design – Getting It Right

Maree Marshall¹ Brad Parker²

1 SALT

2 SALT

Waste is often brushed aside, but a constant for all developments. Maree Marshall explores the core elements of waste management, the potential savings in space and operating costs and the impact of neglecting the principles of waste design.

Maree is an associate with SALT with over 14 years' experience in Waste Management, and is one of Melbourne's leaders in Waste Engineering. Maree is known for her knowledge and passion on waste and has changed the prominence of Waste Engineering Design and the need for early consideration in development planning.

The presentation will showcase the significant improvements that can be achieved when the right equipment, the right waste streams and the right collection practices are implemented into one of Melbourne's largest mixed-use developments with over 2200 residential apartments and 2800m² of retail space.
